

Hot holding temperature chart

Hot Dog

Hot dog that is meant to be served and displayed for a long time require elevated temperatures for storage. Hot dog is held at 57°C or above to stop the growth of harmful microorganisms and preserve food safety.

In hot holding, the following must be considered:

- Use **only equipment intended** for hot holding.
- Hot holding equipment is **not intended for cooking or reheating hot dog**.
- **Cover hot dog** to protect them from contamination.
- **Do not serve hot dog** that was kept below the recommended hot holding temperature.
- When foods are in chafing dishes, **avoid stirring hot dog**.
- Do not use hot-holding equipment for **reheating hot dog**.
- Measure the temperature at **regular intervals**.
- **Do not mix** new batches with the ones already on display.
